

Overview of FACS histograms

Overview of FACS histograms of the distinct surface marker (one representative donor shown); Histogram overlays of the three compared passages show that MSC do not change significantly their surface marker profile during long-term cultivation: CD11b⁻, CD34⁻, CD44⁺, CD45⁻, CD73⁺, CD90⁺, CD117⁻, and HLA-DR⁻; (blue line = passage 2; red line = passage 5; green line = passage 10)
